

International Code Council
ICC Off-Site Construction Mechanical

offsite, develop a whole building air tightness quality control program to include the following:

- Specific manufacturing station air tightness quality control checks as part of the broader modular quality control program that travels with each module during off-site prefabrication process
- When possible, blower door test and air leak identification to determine overall envelope air tightness quality and improvements to be made for future modules in production.

III. CONSTRUCTION OF THE INITIAL DRAFT INTENDED FOR PUBLIC COMMENT

- A. Chapter designation, verification of terms for consistency, code language and deletion of extraneous verbiage.
